. Easy, smooth gameplay -lovely relaxing music -pretty looking -cheap -interface screams "mobile game!" but not a big deal. Solid game, controls felt smooth, but offers few innovations. You should be able to tell whether you like this or not from the store page. Since you can grab it for almost free, there is little to regret if you are looking for something to sink a few hours into.. I guess I should have taken the title literally, but it was never made that clear how tough the game would be. The difficulty curve is unforgiving, making this a fairly frustrating experience. There are no checkpoints, so if you fall off the level, you always have to start over. Sometimes foreground objects can obscure your view when hopping between platforms. The blurb got "time killer" right, but most of the other points - "interesting setting" fairly samey levels, "Nice graphics" standard Unity visuals, "soundtracks" kind of goofy, but somewhat works with the game. The sound effect that plays when you collect the umbrellas is pathetic. I gave up after Level 1-8 and the diagonal bomb path. I don't know what kind of masochist would tolerate any more of the game. Disappointing, as the idea of a simplistic 3D marble/ball platforming game had potential.. I think you should play classic bounce games one more again, before play hardcube. Because hardcube doesn't show innovation to us. Only waft, bounce and collect. Again and again and again.. Really good game. The movement can get a little better, but overall the game is really good. LOVEEE THE GRAPHICS BTW.. Its a fun little marble/ball physics game. A boring, overdone experience. Nothing of interest to be seen here, spend your money somewhere else.
